Department of the Navy SBIR/STTR Transition Program

DISTRIBUTION STATEMENT A. Approved for public release. Distribution is unlimited. MCSC-PRR-2474

Triton Systems is a Global Business Venture company that successfully launches innovative products and solutions in emerging markets worldwide. We invest in new technologies through in-house incubation and external partnerships — creating thriving businesses from novel ideas.

WHO

SYSCOM: MARCOR
Sponsoring Program: PM Engineer Systems
Transition Target: PM Combat Support Systems (CSS), Family of Water Purification Systems
TPOC: sbir.admin@usmc.mil

Other transition opportunities:
- NAVSEA
- NAVAIR
- Special Operations (JSOC)
- Army
- Air Force
- Disaster Relief (FEMA)

Notes:
- Image of Low Power Water Purifier and typical estuarine operating environment.

WHAT

Operational Need and Improvement:
- USMC Warfighters operate in austere environments where local water must be purified before drinking.
- Resupply of water is difficult and expensive via air-drop or convoy.
- Freshwater purification systems cannot purify brackish water.
- Current small-scale seawater purifiers do not produce enough water.
- A brackish water purifier is needed to support USMC Warfighters.

Specifications Required:
- Meet purification standards in TB MED 577.
- Support Squad-level need to purify 6-10 gallons of water in 1 hour.
- Weigh < 10 lbs.
- Purify brackish water with salt content up to 5000 ppm.
- "Marine-powered".

Technology Developed:
- Marine-powered reverse osmosis system that meets TB MED 577 water quality.
- Low-power input enabled by energy recovery pump.
- Anti-fouling coating increases filter permeability for increased water production.
- Provides drinkable water for 30 days from brackish source.

Warfighter Value:
- Enables purification of saline surface water.
- Reduces amount of water carried on mission.
- Improves field self-sufficiently of USMC Warfighter.
- Reduces or eliminates logistics and cost of water resupply.
- Enables missions not otherwise possible due to resupply constraints.

HOW

Projected Business Model:
- Triton Systems will manufacture Low Power Water Purifier for Marine Corps.
- Plan direct manufacture at low-rate with transition to contract manufacturing.
- Will apply for patent protection on any resulting IP.

Company Objectives:
- Triton may elect to license or sell the technology to a third party as the business opportunity develops.
- We will seek other military and non-military applications for this technology.

Potential Commercial Applications:
- Potential non-military uses for disaster relief in coastal regions where ground and surface water sources are contaminated with seawater.
- Anti-fouling coating can be used to improve the performance of sea water RO systems.
- Improved hand-operated survival system for life rafts and downed air crews.
