

FORTIFIED SECURITY FOR INDUSTRIAL NETWORKS

Fortiphyd Logic equips you with the tools and training to defend your industrial control system networks.

Fortiphyd Network

Uses advanced deep packet inspection and machine learning to alert operators of malicious behavior or network performance issues

Passive monitoring has zero impact on critical operational network uptime

Fortiphyd Host

Patent-pending technology that provides lightweight endpoint protection for industrial controllers

Continuously monitors program execution behavior to alert on unauthorized modifications even from trusted insiders with physical access

Better together

Fortiphyd Network and Fortiphyd Host can each be installed as stand-alone products, or combined for maximum security

FORTIPHY

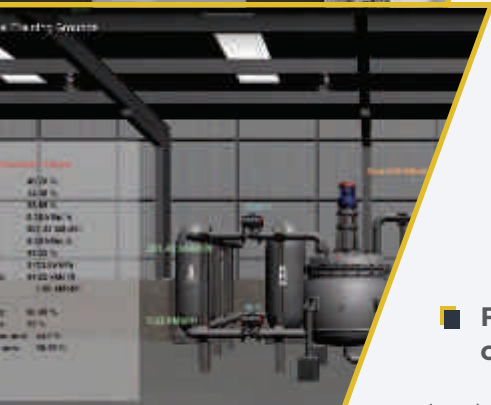

LOGIC

Virtual Training Grounds

■ Hands-on realistic exercises

Practice real-world exercises from both the operational technology (OT) and information technology (IT) sides of industrial network security

■ 3D simulations of physical plants

See the physical consequences of your successful attacks or failed defenses

■ Fraction of the cost of competitors

Flexible and affordable so you can learn on your own time, on your own dime
