# BEACON

Enabling Sustainment
Empowering the Digital Warrior

A Digital Innovator Providing Mission Critical Technologies to the Department of Defense

Over the course of 25 years, Beacon has transitioned from a software startup in Cambridge, MA delivering enterprise software systems to private sector customers into a rapidly growing non-traditional defense contractor providing digital solutions to the Department of Defense.

Our solutions address the fundamental questions of how do we take care of our equipment, and from that experience, how do we do it better next time as well as inform future make/buy decisions.

Beacon's award-winning digital products are integrated into a modular architecture that empowers a full range of users and provides a comprehensive operational picture across the sustainment lifecycle.

TOOLS

PEOPLE

WORK

PARTS

LOGS

Actionable Intelligence Informed by a Real-time Integrated Picture of People, Process and Equipment.

Digital Transformation

With a focus on the transformative effects of digitizing work, Beacon's products drive efficiencies and operational visibilities.

Operational Logging

Work Management

Repair & Maintenance

Decision Analytics

Our Products

eLogBook

eLogBook revolutionizes the U.S. Navy's shipboard logging process by converting manual paper logs to electronic logs, streamlining entry and utilizing data as part of a maritime IoT solution.

eTagOut

eTagOut is an intuitive yet comprehensive safety application for use by maintenance personnel onboard ships as well as at Shore Support. Provides Chain of Command with an understanding of impact on mission readiness.

SEAS

The Shipboard Energy Assessment System (SEAS) provides real-time energy management capabilities by aggregating and analyzing operational data to provide Energy C2 for informed shipboard decision-making.

TurboWork

TurboWork digitizes front-line worker activity and enhances point of performance capabilities from a desktop or handheld device, integrating people's actions with data and systems for a full operational picture.

Connex

Focused on the Science and Technology community, Connex links user needs and ideas to investment decisions, activities and outcomes in one intuitive digital platform for Portfolio Management.

AIRS

By digitizing the Flight Line, the Aircraft Infrastructure Readiness System (AIRS) streamlines repair and maintenance processes, drives efficiencies and increases aircraft availability.

Beacon is consistently recognized for actively engaging with end-users and delivering high-value warrior-centric solutions.
