ABOUT US

Pacific Engineering, Inc. (PEI), is an one stop, engineering, design, prototyping and testing, manufacturing company headquartered in Roca, NE.

PEI has been performing engineering design services, product development, prototyping and manufacturing complex, high strength, light weight, composite and metal components since 1998.

PEI has been recognized for our work by the Small Business Administration and the Naval Small Business Innovation Research (SBIR) program . We have been awarded the Tibbets Award from the SBIR program and the Team Excellence Award by NAVSEA Commander.

OUR WORK

DESIGN

We are experts in developing lightweight, high strength composite parts. We design composite to metal joining and tooling, along with performing static and dynamic analysis with our team of trained engineers.

PRODUCTION

Resin transfer molding, vacuum assisted resin transfer molding, filament winding, hand lay-up and compression molding are all production processes the skilled engineers of PEI employ.

FINAL PRODUCT

Our final products go through inspection and quality control to ensure our work is up to the standards of our clients.

We stay ahead of
the curve by
leveraging
innovation and
expertise.
