

AnthroTronix Develops Innovative Technologies In The Areas Of:

- Digital health and applied neuroscience
- Simulation and training

AnthroTronix Has Won Numerous Awards Including:

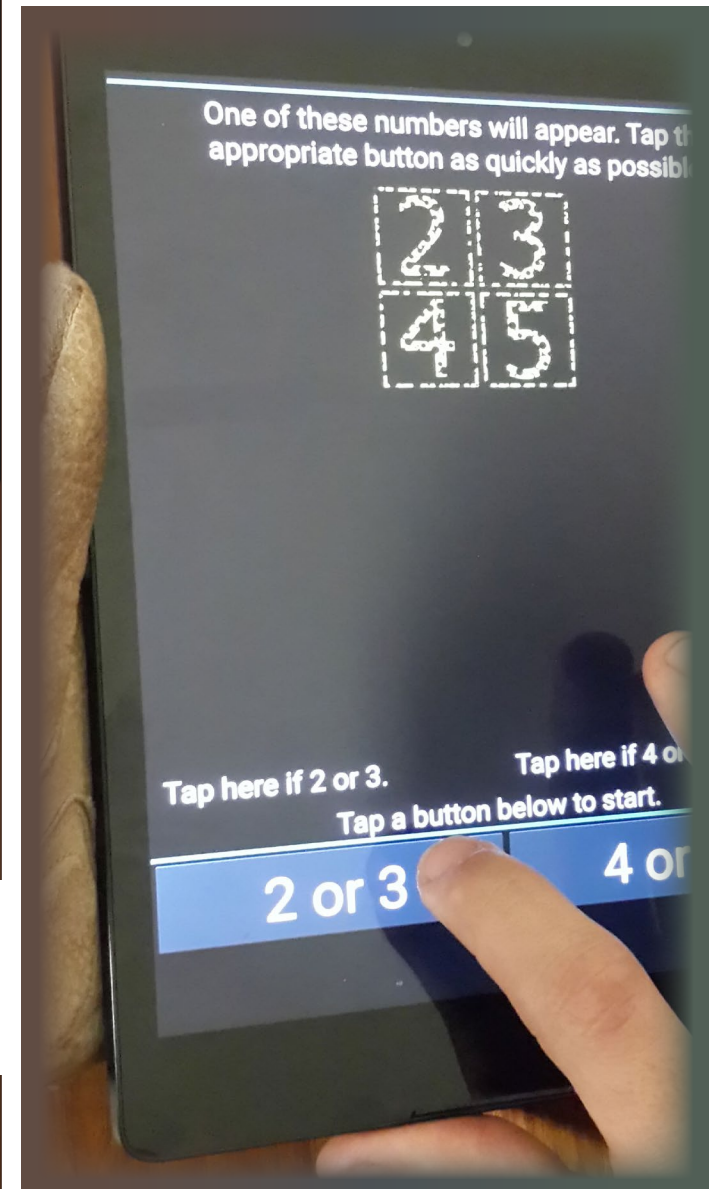

- 2015 Gold Edison Award™ in the medical testing and evaluation category for its development of DANA™
- Selected as a 2015 FiReStarter Company at the Future in Review Conference
- Chosen by the World Economic Forum as a Technology Pioneer company

AnthroTronix

AnthroTronix

We design and develop systems to optimize human technology interaction.

Company Background

Founded in 1999, AnthroTronix focuses on working with Federal Government agencies and commercial customers to research and develop innovative technologies, focusing on digital health solutions and simulation and training.

Who We Are

AnthroTronix is an award-winning engineering research and development small, woman-owned business that produces human-centered technology. Our team of creative visionaries, comprised of designers, engineers, and scientists, works together to develop innovative, research-based technologies that influence change and enhance the lives of end users.

Core Competency

AnthroTronix combines industry expertise with innovation to develop research-based software and hardware technologies that address human needs.

We supply advanced product development and R&D services to industry leaders within the commercial and governmental sectors.

We have extensive experience in basic and applied research and development related to digital health and military simulation and training.

Products

DANA™

DANA™, the Brain Thermometer®, is an FDA-cleared mobile app that objectively measures changes in cognitive processing. DANA provides objective measurement of cognitive processing in under 5 minutes to help assess cognitive readiness. It can be used wherever cognitive metrics drive successful job performance and to assist in making critical “Fit-for-Duty” and “Return-to-Duty” decisions.
