

SENVOL®

Data to help companies implement additive manufacturing

SENVOL'S PRODUCTS TO:

Access AM Data

Senvol Database™
Senvol API™
Senvol Indexes™

Generate AM Data

Senvol SOP™

Analyze AM Data

Senvol ML™

ACCESS AM DATA

Senvol Database

First and most comprehensive database of industrial AM machines and materials. Contains spec-sheet data provided by machine manufacturers and material suppliers.

Senvol API

Provides access to the Senvol Database raw data and is indispensable for any AM-related software.

Senvol Indexes

Pedigreed data sets for AM material characterization. All Senvol Indexes include test specimen properties, and their associated process parameters and feedstock characteristics. All Senvol Index data is developed by Senvol.

GENERATE AM DATA

Senvol SOP

A standard operating procedure that details how to generate pedigreed AM data. The 100+ page manual is used by organizations to ensure that every data generation project follows a standard procedure.

ANALYZE AM DATA

Senvol ML

A software suite that helps companies quickly characterize or qualify AM materials and processes. Senvol ML includes a data-driven machine learning algorithm that analyzes the relationships between AM process parameters and material performance.

CONSULTING

Senvol Services

The consulting division of Senvol. Senvol Services provides both business and technical expertise in AM, with a particular focus on projects that are data-related.
