WARRIOR PERFORMANCE PLATFORM (WP2™)

TIAG® is honored to introduce Warrior Performance Platform (WP2™) — designed as a peerless solution to help Department of Defense military operations make smarter, safer decisions in training. Leveraging the technology of wireless, wearable devices, WP2 is a dynamic, customizable tool that allows military leadership to continually evaluate, adjust and optimize the training, performance and readiness of deploying units.

As a purpose-built performance-tracking platform for the DoD and federal community, WP2 monitors key indicators of a warrior's health and capability, maximizing the value of real-time and historical data within one centralized system. Providing the capability to uncover trends, develop insights, reduce risk and prevent negative outcomes, WP2 enables leadership and instructors to customize training programs that push these warriors to perform at their absolute best, while curtailing chronic/overuse and stress-related injuries.

Simultaneously, the WP2 platform monitors hundreds of warriors throughout the readiness cycle, informing key command decision makers to support mission and training adjustments. Holistic evaluations can be tailored to reflect each command's unique requirements. Leaders can measure mission performance based on preparation, physical fitness, strength and capabilities. Facilitating individualized training and readiness linked to successful mission execution, WP2 empowers leaders and instructors to spend more time with warriors and less time in spreadsheets.

ENHANCING AND ADVANCING WARRIOR PERFORMANCE AND OPERATIONAL READINESS

The WP2 platform fuses TIAG's demonstrated expertise in data analytics, telemedicine and cutting-edge health IT solutions with decades of lessons learned within military communities and professional sports arenas. Advancing proactive performance management from training through deployment, WP2 is powered by applied science and next generation human performance analytics — integrating the CoachMePlus performance-optimization solution used by major teams across the NFL, NHL, MLB, NBA, NCAA, MLS, CFL and military.

Per a Small Business Innovation Research (SBIR) Phase II award sponsored by the US Naval Supply Systems Command, WP2 is being adapted for use in afloat and ashore environments within a physical kiosk manifestation. The project, known as the Human Performance Self-Service Kiosk and Application, expands the core WP2 feature set with additional nutrition-oriented capabilities and enables integration with other DoD sources of health and nutrition information, with the end goal of deploying the platform fleet-wide.

Per a SBIR Phase II award sponsored by the Air Force Research Lab and AFWERX, the WP2 team is adapting the commercial WP2 capability for Air Force-specific use. Initial focus areas include remote fitness coaching for distributed populations, such as the Air National Guard, as well utilization of WP2 as an enabler of Air Force Health Promotion initiatives. Pilots with a number of operational units are currently underway.

WP2 STRENGTH, READINESS & PERFORMANCE TOOLS

Providing access to performance data all in one place, WP2 is a secure, accreditation-ready platform that provides immediate value. The enterprise application includes front office, warrior profile, reporting, permissions and security features. A centralized workflow features warrior app, team access point and additional workflows. Individual, customized dashboards and advanced analytic capabilities to meet specific command needs.

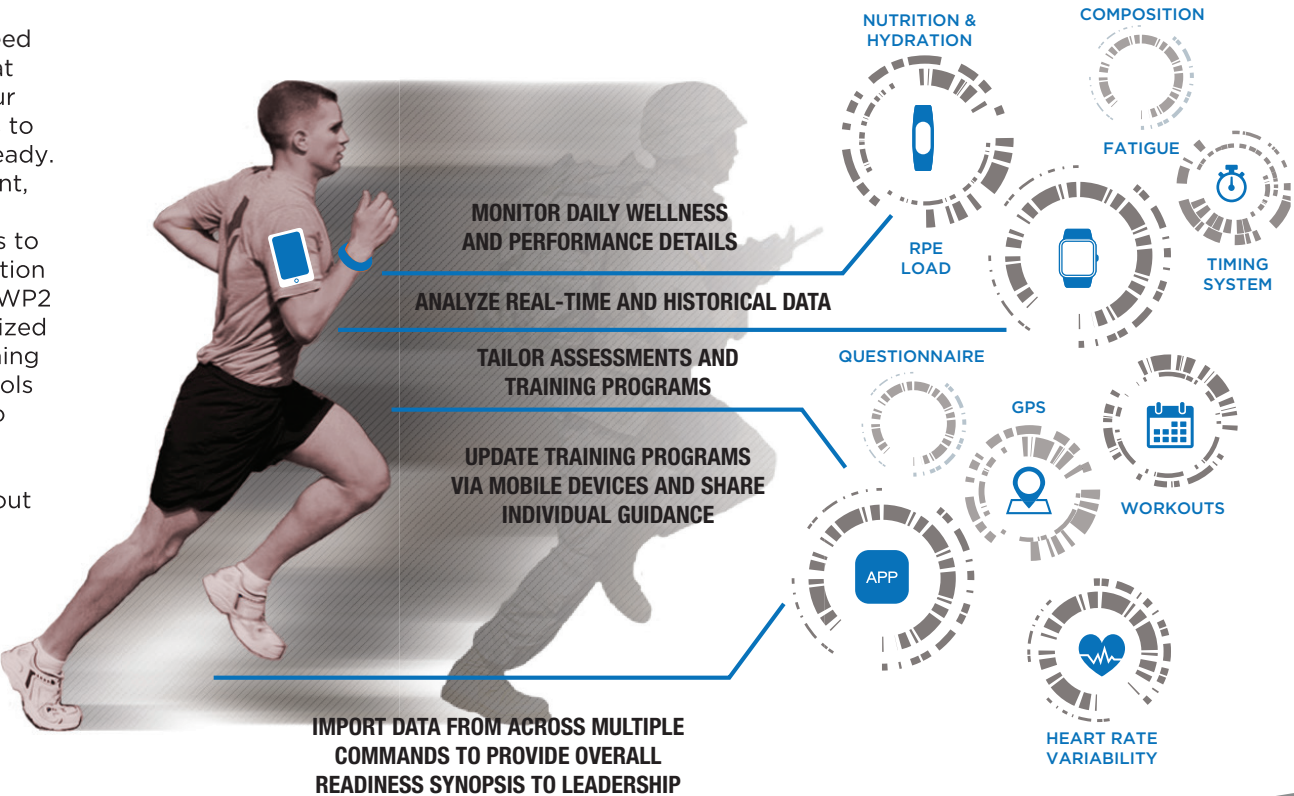

A robust security and permissions management system for groups and individuals. Providing secure, 24/7 information access, all information is encrypted in transit and at rest. WP2 works with more than 60 wearable device technologies and integrates the data of those technologies into our centralized platform — making it part of your overall warrior analysis.

WP2 is developed exclusively by US Citizens, operating on American soil.

Your warriors need to be prepared at all times and your command needs to know they are ready. Providing efficient, 24/7 mobile and computer access to detailed information all in one place, WP2 includes customized monitoring, training and reporting tools that allow you to decide what you share and with whom. Throughout the readiness cycle, you can...
