TRITON SYSTEMS, INC.

High Optical Power Hull Penetrator for Submarine Fiber Optic Systems

Triton Systems' High Optical Power Hull Penetrator is a key technology to deliver high optical power to submarine systems. Special fibers are used to mitigate issues seen in attempting to put high electromagnetic energy through fiber in a submarine. The penetrator allows more power to be delivered to a submarine system while decreasing risk to the rest of the submarine architecture by using proven hull penetrators. Triton System Inc. has a wide ranging expertise in underwater vehicle systems engineering and ultimately would like for the technology to be purchased by prime contractors for integration into submarines. As a technology incubator, Triton has helped deliver over $4 billion in shareholder value.
